

CONJUNCTION

Your first quest

A villager lost her ring to bandits. You build this quest step by step, from an empty project to the upload

What we build

The player has to talk to a villager, find the bandits' hiding place, take her ring out of a chest and bring it back to get paid

About 15 minutes. Every quest is built the same way

1 Create a project

1. Start **Conjunction** and open **Projects**
2. **New project**, name it **The Lost Ring**
3. Choose **Quest** (a **Place mod** adds objects that are always in the world)
4. **Create and open ingame**: the game starts and loads your last save

The Lost Ring

☒ Quest

Steps, talks and a journal entry. Its places come and go with the quest

☐ Place mod

A place that is always in the world: a house for Geralt, a camp, decoration

Cancel Create Create and open ingame

A project is one mod: the quest, its NPCs, objects, items and dialogues

The editor

The bar at the top

- ▶ **Select:** click what you placed, move and turn it
- ▶ **Asset Browser:** NPCs, creatures, objects and items to place
- ▶ **Look:** only moves the camera
- ▶ **Project:** the panel with Places, Quest and Build
- ▶ **Build & Play:** puts the quest into the game

How a quest is built

GOAL

The player has to do something (talk, go to, collect, kill ...)

ACTION

The game does something by itself (reward, weather, hostile ...)

CHOICE

Splits the quest into branches

MEANWHILE

Steps alongside the story

CHAPTER

A heading, can add journal text

END

Completed or failed

- ▶ **Project > Quest.** The quest runs from **QUEST STARTS** down, one step after the other
- ▶ Click a block to add it after the selected step, or drag it onto a line
- ▶ The ▼ next to a step chooses what it is (Talk, Go to, Collect ...)
- ▶ Click a step: its **card** opens below the graph. What is missing is written in red

The quest's settings

- ▶ Click **QUEST STARTS** to set up the quest
- ▶ **Kind**: where the journal lists it (main quest, side quest, contract, treasure hunt)
- ▶ **Starts**: at once, **with** a quest of the game or **after** one (picked in the story map)
- ▶ **Plays as**: Geralt or Ciri
- ▶ **Level** and **Description** (the journal text)

The name at the top of the Quest tab is the quest's name in the journal

Start with or after a quest of the game

- ▶ **Starts > With a game quest ... or After a game quest ...** opens the story map
- ▶ Click a quest: what it waits for lights up gold, what waits for it blue
- ▶ **Start my quest with this** or **Start my quest after this**

The quest enters the journal and its NPCs the world when it starts

2 Talk to the villager

1 Click **GOAL**, then **Talk** in its list

2 On the card: **who** > **Create a new person**

Pick in world takes an NPC you placed before

2 Choose who she is

1 Search **townswoman**, double click **Rich Townswoman**: a folder with her 9 looks

2 Click a look with a green speech mark, then **Place**

Green: this look moves the mouth when she talks. Red: it stays silent

Folders in the Asset Browser

- ▶ A tile with a tab and a number is a folder
- ▶ **5 variants:** different people of one kind. **9 looks:** one person in different clothes and faces
- ▶ **Place random** takes one of them at random
- ▶ A double click opens the folder. Then you choose one yourself

 Can talk

 A folder where some can talk and some stay silent

 Stays silent

2 Place her in the world

- ▶ She follows the cursor, click where she should stand
- ▶ The panel turns see-through, the bottom says what the next click does (**Esc** cancels)

She now belongs to the quest: she is in the world while the quest runs

2 How the dialogue starts

1 **starts** sets how the dialogue begins. Choose **NPC calls out**

2 Type what she calls. **Edit dialogue** opens the dialogue editor

2 What she says

1. **LINE** adds what someone says: her line
2. **CHOICE** adds the player's options: **I'll find it.** and **Not now.**
3. Each option ends with **end: continue** (the quest goes on), **end: repeatable** (talk again later) or **end: fail quest**. **Not now.** gets end: repeatable

***Back** returns to the quest. **IF** adds a condition*

3 Go to the hiding place

1 GOAL > Go to

2 Type the objective at the top of the card, then + **Set the spot**

3 Click to put the flag down. The ring is how close the player has to come (**more** changes it)

4 Get the ring

1 GOAL > Collect, then + item

2 Search **ring**, rename it **Grandmother's ring**, **Choose item**

A renamed item is a new item of your quest

4 Put it in a chest

1 **where > in a container**, then
Create a new container

2 Place a chest at the flag

3 **Random loot: Off**: only the ring is
inside

5 Bring it back

1 **GOAL** > **Talk**, under **who** pick her (she is already placed)

2 In her dialogue the option **Here it is.** gets **Effects** > **Player gives an item** > the ring

The option shows only while the player carries the ring. The step becomes **Deliver**

6 Reward and end

1. **ACTION** > **Reward**: 50 crowns, 50 experience (+ **item** adds items)
2. Drag the reward's output (the small square at its bottom) onto **QUEST ENDS: SUCCESS**
3. Every output has to lead somewhere. Until then the step says **output not wired**

Your quest: talk, go to, collect, deliver, reward, end

Test it

1. **Build > Check** (seconds): plays the quest through and says where a branch gets stuck
2. **Build & Play** (1 to 2 minutes): the game saves, closes, the quest is built, the game starts again with that save
3. A step's ... > **Play from here** starts the quest at that step

In the game

She calls when the player comes near. To change something: F8, change it, Build & Play again

Sprint [Press] None
Jump None
Witcher Senses [Hold] None
Call Horse [Press Twice] None

Share it

- ▶ **Build > Export quest file**
- ▶ You can change the name, the start and the description. Then Conjunction builds the quest and opens a folder with:

Zip

for Nexus and mod managers

.w3q file

for Conjunction's Library

Page text

for the quest's Nexus page

Players install only the quest, the page text links what it needs
